Bug Reports: Swag Labs Web Shop

Document ID	BR-SL-001
Reporter	Davit Jikurashvili
Date found	17 October 2026
Environment	https://www.saucedemo.com (production demo, no build number exposed) · Chromium 156 (Playwright 1.64) · Windows 11 · 1280×800
Password for all accounts	`secret_sauce`

Each defect below was reproduced at least twice on 17 October 2026 with `scripts/capture-evidence.js`, which saves the screenshots and writes the observed values (URLs, field values, console errors, timings) to `evidence/evidence-log.json`. Results are compared with the baseline account `standard_user`, where the same steps work correctly.

Summary

ID	Title	Account	Severity	Priority
BUG-001	All products show the same placeholder image	problem_user	Medium	P2
BUG-002	Product sorting has no effect	problem_user	Medium	P2
BUG-003	"Add to cart" does nothing for 3 of 6 products	problem_user	High	P1
BUG-004	"Remove" on the products page does not remove items	problem_user	Medium	P2
BUG-005	Typing in Last Name overwrites First Name; checkout blocked	problem_user	Critical	P1
BUG-006	Product link opens the wrong product	problem_user	High	P2
BUG-007	"Add to cart" throws a JavaScript error for 3 products	error_user	High	P1
BUG-008	Checkout continues with an empty, uneditable Last Name	error_user	High	P2
BUG-009	"Finish" does not complete the order	error_user	Critical	P1
BUG-010	Product list shows wrong prices that change on reload	visual_user	Critical	P1
BUG-011	Login takes about 5 seconds	performance_glitch_user	Medium	P2
BUG-012	Layout defects: wrong image, misplaced cart icon, shifted titles	visual_user	Low	P3

Totals: 3 Critical · 4 High · 4 Medium · 1 Low

BUG-001: All products show the same placeholder image

Field	Value
Severity / Priority	Medium / P2
Account	problem_user
Related test case	TC-011

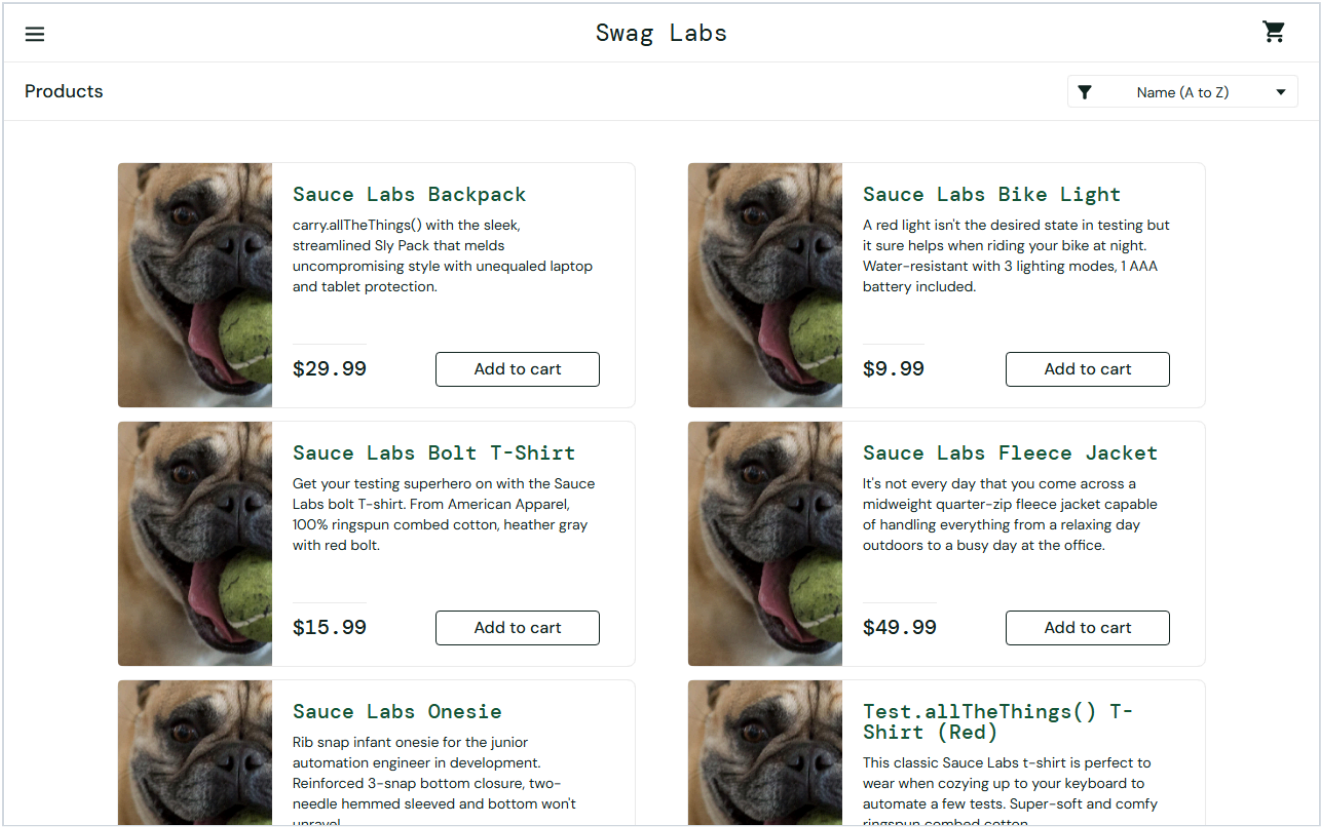

Steps to reproduce

1. Log in as `problem_user`.
2. Look at the product images on the Products page.

Expected: Each of the 6 products shows its own product photo.

Actual: All 6 products show the same image (a dog). Every `<img>` points to `/assets/sl-404-*.jpg`.

Impact: Customers cannot see what they are buying, which is likely to reduce conversion.

BUG-002: Product sorting has no effect

Field	Value
Severity / Priority	Medium / P2
Account	problem_user (also reproduced with error_user)

Field	Value
Related test cases	TC-013, TC-014

Steps to reproduce

1. Log in as `problem_user`.
2. Select **Name (Z to A)** in the sort dropdown.
3. Select **Price (low to high)**.

Expected: The list is re-ordered: Z→A starts with "Test.allTheThings() T-Shirt (Red)"; low→high starts with $7.99.

Actual: The order stays A→Z (Backpack $29.99 first) after both selections, and the dropdown keeps showing "Name (A to Z)". For `error_user` each selection also opens a browser alert: "Sorting is broken! This error has been reported to Backtrace."

Evidence: `BUG-002` in evidence-log.json (the page looks exactly like the BUG-001 screenshot, so no separate screenshot).

BUG-003: "Add to cart" does nothing for 3 of 6 products

Field	Value
Severity / Priority	High / P1
Account	problem_user
Related test case	TC-019

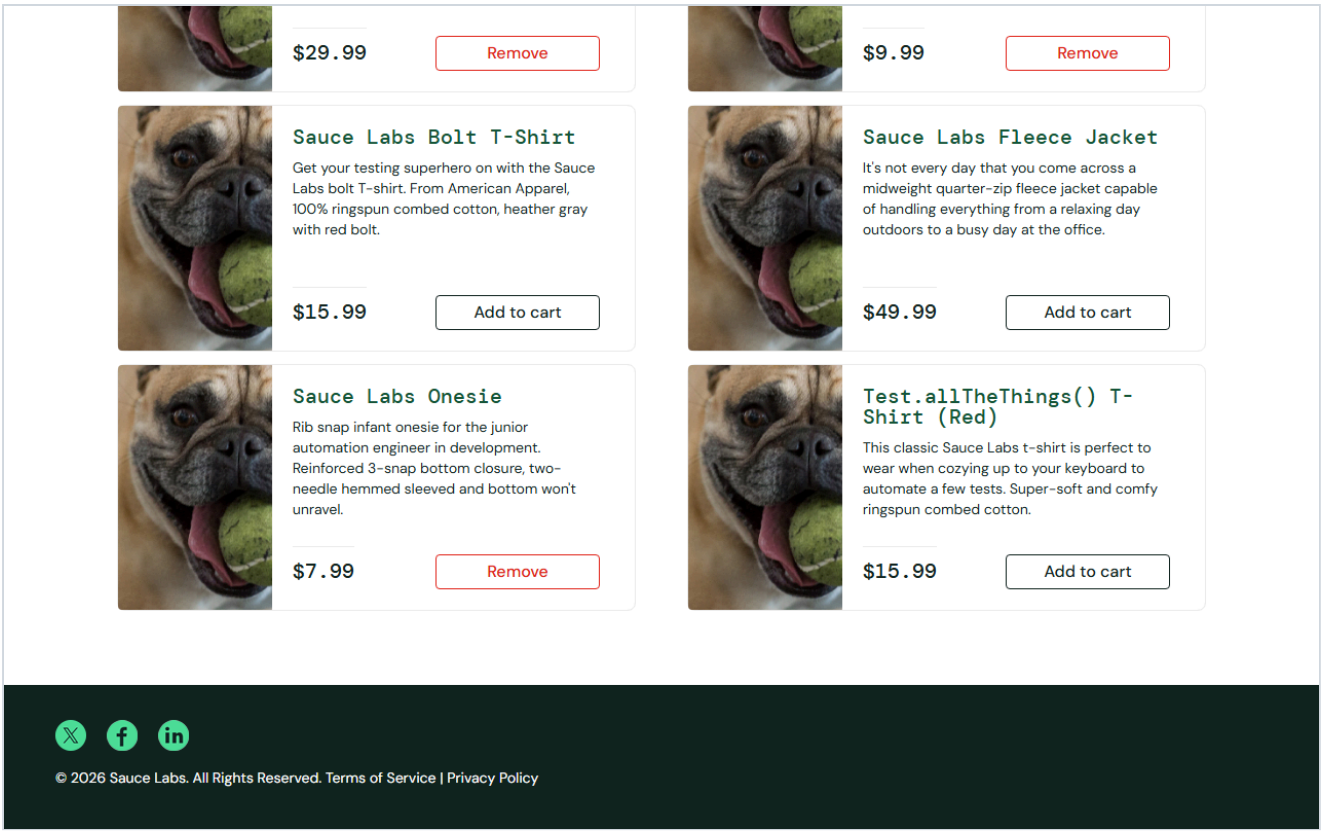

Steps to reproduce

1. Log in as `problem_user` with an empty cart.
2. Click **Add to cart** on each of the 6 products.

Expected: All 6 buttons change to **Remove**; the cart badge shows 6.

Actual: Only Backpack, Bike Light and Onesie are added. **Bolt T-Shirt**, **Fleece Jacket** and **Test.allTheThings() T-Shirt (Red)** stay on "Add to cart"; the badge shows 3.

Impact: Half the catalogue cannot be bought.

BUG-004: "Remove" on the products page does not remove items

Field	Value
Severity / Priority	Medium / P2 (a workaround exists, see below)
Account	problem_user
Related test case	TC-020

Steps to reproduce

1. Log in as `problem_user`.
2. Add Backpack, Bike Light and Onesie to the cart (badge = 3).
3. Click **Remove** on each of them on the Products page.

Expected: Buttons return to **Add to cart**; the badge disappears.

Actual: The buttons stay on **Remove** and the badge still shows 3.

Workaround: Remove the items from the Cart page.

Evidence: `BUG-004` in evidence-log.json (the page is unchanged from the BUG-003 screenshot).

BUG-005: Typing in Last Name overwrites First Name; checkout blocked

Field	Value
Severity / Priority	Critical / P1
Account	problem_user
Related test case	TC-029

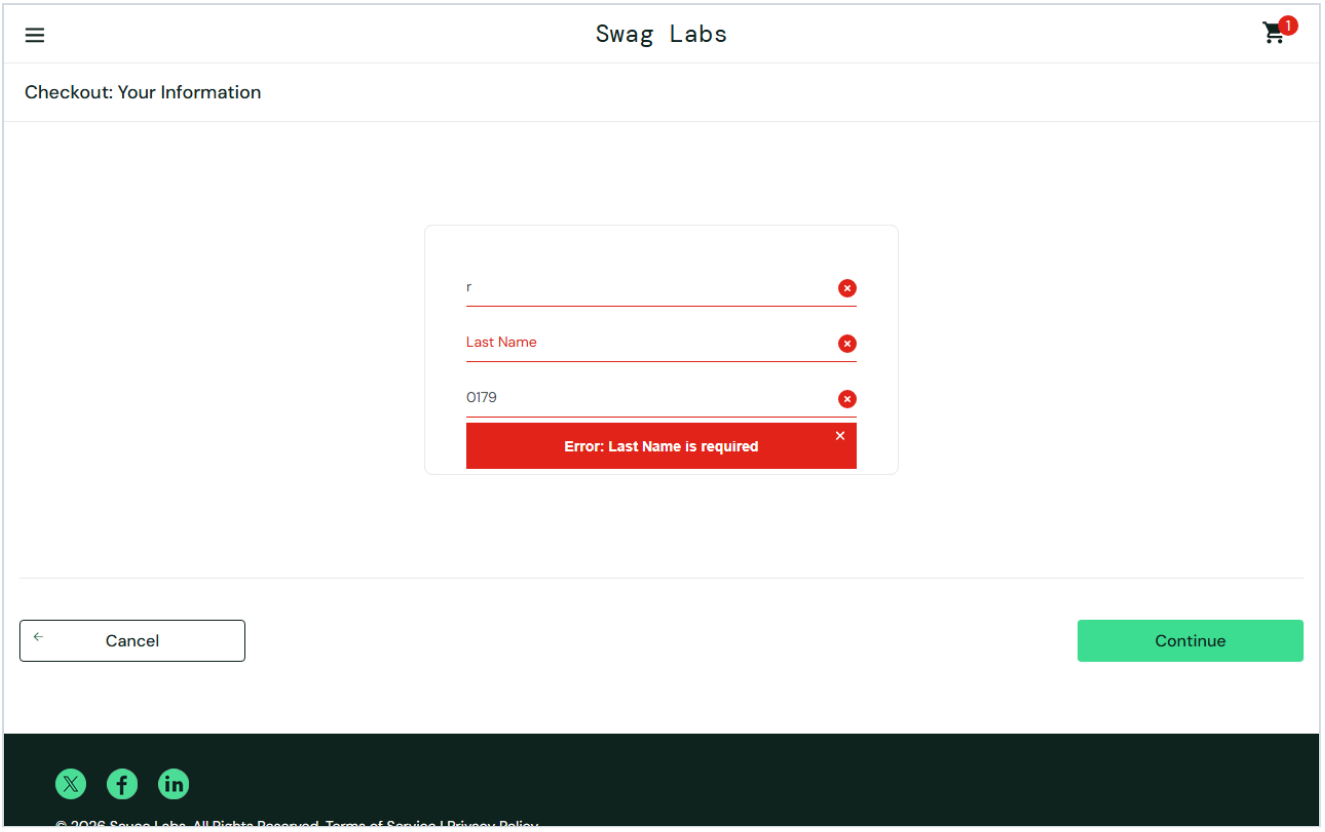

Steps to reproduce

1. Log in as `problem_user` and add any product to the cart.
2. Open the cart → **Checkout**.
3. Type (key by key) `Davit` in **First Name**, `Tester` in **Last Name**, `0179` in **Postal Code**.
4. Click **Continue**.

Expected: The fields contain Davit / Tester / 0179 and the order overview opens.

Actual: Every key typed into Last Name replaces the whole First Name value, so First Name ends up as the last character typed ("r") and Last Name stays empty. **Continue** shows "Error: Last Name is required". (Pasting "Tester" instead leaves First Name = "Tester"; Last Name is still empty.)

Impact: The user cannot complete any purchase; there is no workaround.

BUG-006: Product link opens the wrong product

Field	Value
Severity / Priority	High / P2
Account	problem_user
Related test case	TC-016

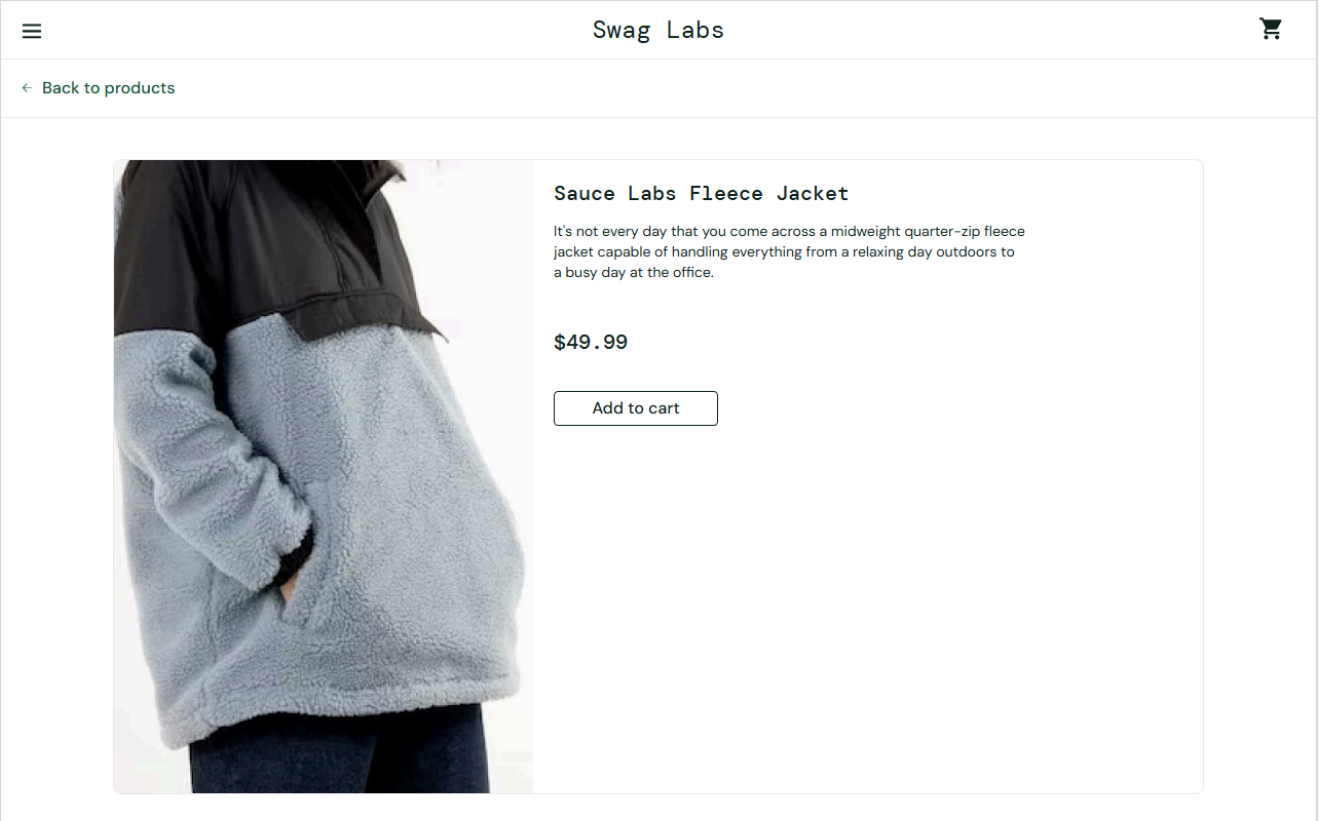

Steps to reproduce

1. Log in as `problem_user`.
2. Click the product name **Sauce Labs Backpack**.

Expected: The Sauce Labs Backpack detail page opens (`inventory-item.html?id=4`).

Actual: The **Sauce Labs Fleece Jacket** page opens (`?id=5`).

Impact: Customers may buy the wrong item.

BUG-007: "Add to cart" throws a JavaScript error for 3 products

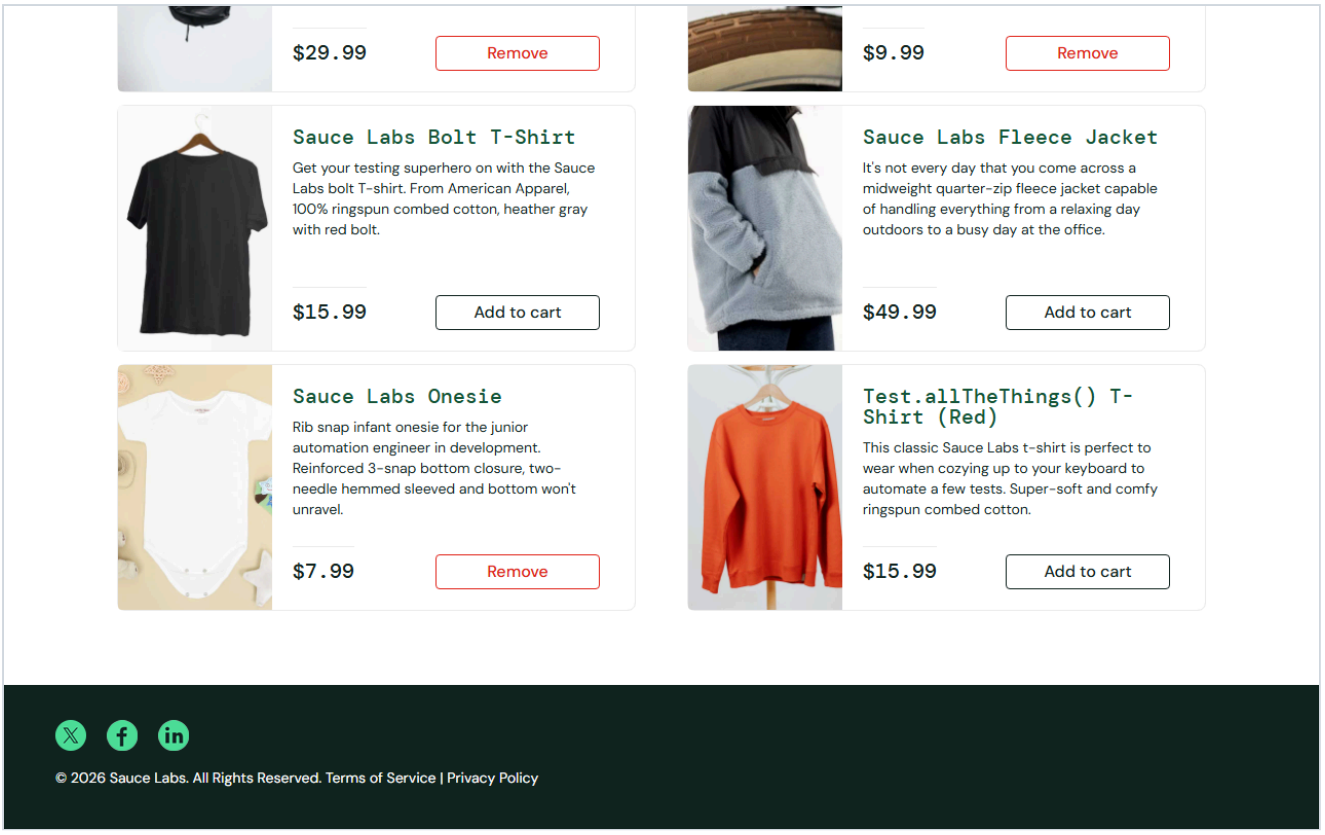

Field	Value
Severity / Priority	High / P1
Account	error_user
Related test cases	TC-019, TC-035

Steps to reproduce

1. Open DevTools → Console.
2. Log in as `error_user`.
3. Click **Add to cart** on Bolt T-Shirt, Fleece Jacket and Test.allTheThings() T-Shirt (Red).

Expected: Products are added; no console errors.

Actual: The 3 products are not added (badge stays at 3 after clicking **Add to cart** on all 6), and each click throws an uncaught `Error: Failed to add item to the cart.` **Remove** on the products page also fails for the 3 products that were added (Backpack, Bike Light, Onesie), with `Error: Failed to remove item from cart.`

BUG-008: Checkout continues with an empty, uneditable Last Name

Field	Value
Severity / Priority	High / P2
Account	error_user
Related test cases	TC-027, TC-029

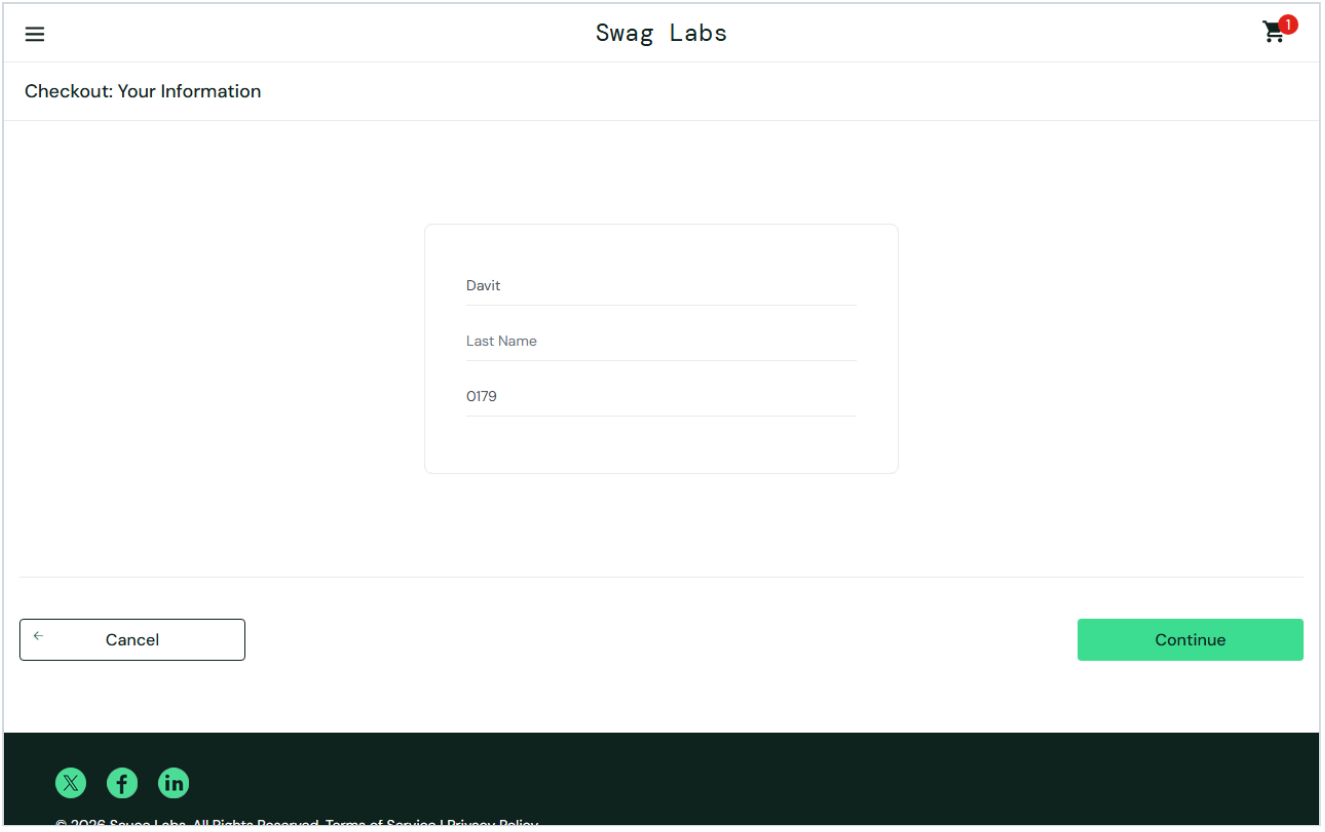

Steps to reproduce

1. Log in as `error_user` and add Backpack to the cart.
2. Cart → **Checkout**.
3. Type `Davit`, `Tester`, `0179` into the three fields and click **Continue**.

Expected: Last Name accepts input. If it is empty, the error "Last Name is required" blocks the step.

Actual: Last Name stays empty whatever is typed; every key press throws an uncaught `TypeError: Cannot read properties of undefined (reading 'value')`. **Continue** still opens the order overview without a last name. **Validation is bypassed.**

Impact: Orders can be created with incomplete customer data.

BUG-009: "Finish" does not complete the order

Field	Value
Severity / Priority	Critical / P1
Account	error_user
Related test case	TC-025

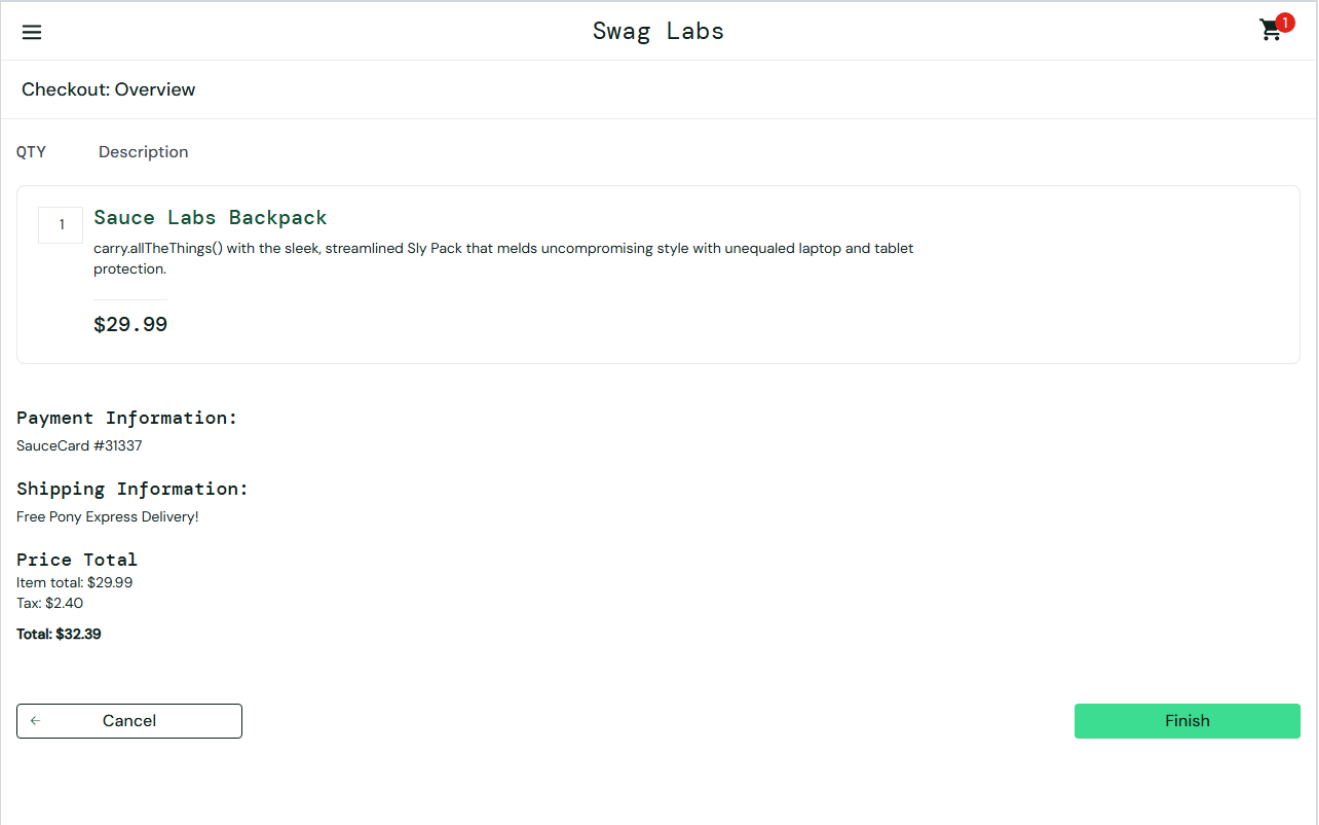

Steps to reproduce

1. Log in as `error_user` and add Backpack to the cart.
2. Complete checkout step 1 and continue to **Checkout: Overview**.
3. Click **Finish**.

Expected: The "Thank you for your order!" page opens.

Actual: Nothing visible happens; the user stays on `/checkout-step-two.html`. The click throws an uncaught `TypeError: La.cesetRart is not a function` (minified code, so the function name may change between builds).

Impact: No order can be placed.

BUG-010: Product list shows wrong prices that change on reload

Field	Value
Severity / Priority	Critical / P1
Account	visual_user
Related test cases	TC-012, TC-014

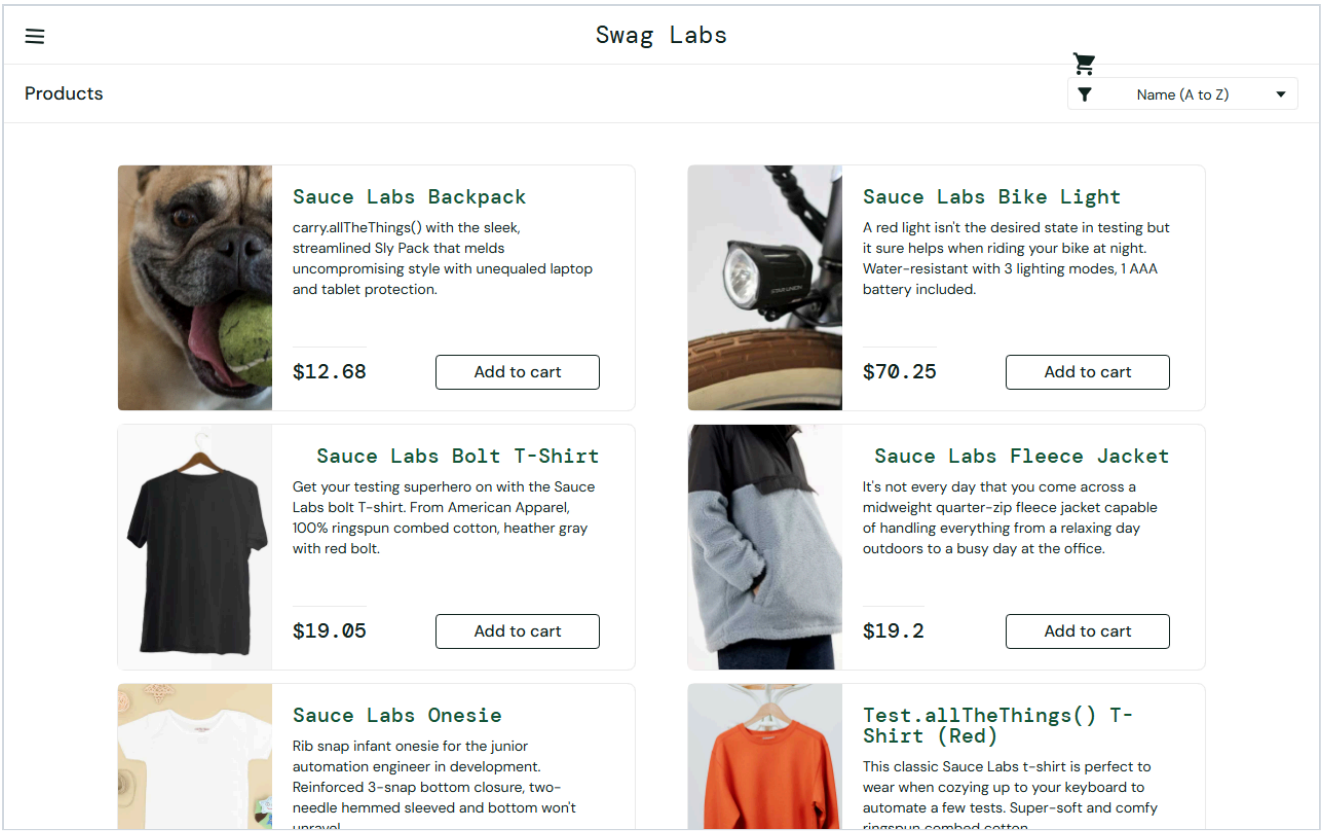

Steps to reproduce

1. Log in as `visual_user`.
2. Note the prices on the Products page.
3. Select **Price (low to high)**, or reload the page.

Expected: Backpack $29.99, Bike Light $9.99, … (same as `standard_user`), always with 2 decimals; low→high shows ascending prices.

Actual: Prices are random and different on every render (in the recorded run: Backpack $12.68, then $29.85 after reload; Fleece Jacket $19.2). Some are missing the second decimal, and after "low to high" the list is not in ascending order. The checkout overview still charges the real price ($29.99), so **the price shown does not match the price charged**.

Impact: Misleading pricing; a possible legal and compliance issue.

BUG-011: Login takes about 5 seconds

Field	Value
Severity / Priority	Medium / P2
Account	performance_glitch_user
Related test case	TC-033

Steps to reproduce

1. Log in as `performance_glitch_user`.
2. Measure the time from clicking **Login** until the first product card is shown.

Expected: Under 2 seconds.

Actual: About 5.1 seconds every time (3 runs: 5.12 s, 5.12 s, 5.11 s), compared with about 0.1 s for `standard_user` under the same conditions (0.10 s, 0.09 s, 0.10 s), roughly 50 times slower.

How it was measured: `scripts/capture-evidence.js`, Playwright Chromium, a new browser context (empty cache and storage) for every run, timer started on the Login click and stopped when the first product card rendered. Raw values: `BUG-011` in evidence-log.json.

Impact: A poor first impression; users may abandon the session.

BUG-012: Layout defects: wrong image, misplaced cart icon, shifted titles

Field	Value
Severity / Priority	Low / P3
Account	visual_user
Related test cases	TC-011, TC-034

Steps to reproduce

1. Log in as `visual_user` and compare the Products page with `standard_user`.

Expected: The layout is identical to the baseline.

Actual:

- The Sauce Labs Backpack shows a dog photo instead of the backpack
- The cart icon is shifted out of the header (at 1280×800 it reaches about 24 px below the header and overlaps the sort dropdown)
- The "Bolt T-Shirt" and "Fleece Jacket" titles are right-aligned instead of left-aligned
- The **Add to cart** button of "Test.allTheThings() T-Shirt (Red)" is shifted to the right, out of line with the other buttons

Why Low and not Medium like BUG-001: one product image is wrong but its name, description and price are correct; BUG-001 replaces all six images.

See the BUG-010 screenshot above (same page) and `BUG-012` in evidence-log.json.
